akkimova®

COMPANY PROFILE

Your all-in-one solution for safety needs

ABOUT US

Akkimova, a decade-strong, strives to lead in CCTV installation in Kochi. We're a dynamic group offering top-notch services, geographically accessible. Our commitment to excellence is evident through constant research. Efficient management ensures our services enhance clients' business operations. Specializing in CCTV installation, we also provide Access control, Biometric Time and Attendance, EPABX, HD CCTV Surveillance, Networking, and Home Security, creating a safe and conducive atmosphere for our customers.

Services

We excel in security and communication solutions for residential and commercial buildings. Our services encompass advanced CCTV systems, reliable networking, intrusion alarms, PBX business phones, biometric attendance tracking, and access control systems. Additionally, we offer top-notch projectors for presentations. Trust us for seamless and secure technological solutions tailored to your needs.

CCTV Systems

Is a sophisticated surveillance technology that utilizes video cameras to capture and transmit video and audio signals to designated monitors or recording devices.

Computer Networking And Wi-Fi Solutions

Encompass the deployment of infrastructure and technologies that enable devices to connect and communicate within a networked environment, either wired or wireless.

Intrusion Alarm Systems

An intrusion alarm system is a comprehensive security solution designed to detect and alert users to unauthorized access or security breaches within a protected area.

Business Telephone Systems PBX

A PBX (Private Branch Exchange) Business Telephone System is an advanced telecommunications infrastructure designed for organizations to efficiently manage and route phone calls within their premises.

Biometric Attendance And Access Control Systems

Biometric attendance and access control systems are advanced security solutions that leverage unique physical or behavioral characteristics of individuals for identification and verification purposes.

Public Address Systems

A Public Address System (PA System) is an electronic sound amplification and distribution system that is used to broadcast audio messages, announcements, music, or speeches to a large or dispersed audience in public spaces or buildings.

Projectors

A projector is an optical device used to display visual content, such as images, videos, presentations, or slides, on a large screen or surface.

Smart Classroom Solutions / Interactive Flat Panels

A Smart Classroom Solution featuring Interactive Flat Panels is an advanced educational technology setup designed to transform traditional classrooms into interactive and engaging learning environments.

Fire Alarm Systems

A fire alarm system plays a vital role in safety across a range of environments like offices, factories, and public buildings.

Flap Barriers

A flap barrier, also referred to as a flap barrier gate or turnstile, is a sophisticated access control system often seen at entrances and exits with heavy pedestrian traffic.

Video Door Phones & Video Intercom Systems

Video door phones, also known as video intercoms or video door entry systems, are security devices used for managing and monitoring entry to residential or commercial properties.

Automatic Gates

Automatic gates, also known as electric gates or automated gates, are a type of entrance or barrier system that opens and closes electronically without the need for manual operation.

Boom Barriers

A boom barrier is a physical security device commonly used in traffic management and access control systems. It consists of a horizontal bar or pole, known as the boom, which can be raised or lowered to control the passage of vehicles.

Vehicle And Parking Management Solutions

Various organisations implement Vehicle and Parking Management Solution to reduce manpower to track their vehicle's entry and exit and provide fool proof security system

Door Frame Metal Detectors (DFMD)

Are security devices designed to identify metal objects on individuals passing through, enhancing safety by detecting concealed weapons and preventing unauthorized items from entering secured areas.

Baggage Scanners

Are advanced security devices used to inspect the contents of luggage, ensuring safety by detecting prohibited items, weapons, or any potential security threats.

Anti - Shop Theft Solutions

Anti-shop Theft Solutions prevent theft or shoplifting in retail stores using an Electronic Article Surveillance (EAS) security system. This involves antennas at the store's front and EAS tags on products.

Firewalls

A firewall acts as a digital gatekeeper within computer networks, diligently analysing incoming and outgoing data packets based on predefined security rules.

Video Management Systems (VMS)

Ensure 24/7 surveillance feed management and monitoring from any location. Gain insights from real-time and historical footage, utilizing advanced analytics for enhanced safety and asset protection.

Library Automation

Library Automation enhances the efficiency and security of library operations through technology. Tags attached to library items enable automated check-in, check-out, inventory management, and security measures.
